* NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

During sequence assembly data is compared iron overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL: Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of

Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.
                                                                                                                                                         418 AAGAACAGGAGACAAGACAATTCAAATGTCCTTACACAGAAGACTGATTATATAGATA 477

Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:25098585.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold') within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   **NOTE: Estimated insert size may differ from sequence length

** (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

**NOTE: This is a 'working draft' sequence. It currently

**Consists of I contiggs. Gaps between the contigg

** are represented as runs of N. The order of the pieces

** is believed to be correct as given, however the sizes

** is believed to be correct as given, however the sizes

** of the gaps between them are based on estimates that have

** provided by the submittor.

** This sequence will be replaced

** by the finished sequence as soon as it is available and

** the accession number will be preserved.

** I 220394: contig of 220394 bp in length.

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AP123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared mouse DNA was annealed to adaptored vector DNA, and transformed into adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells

Clones are derived from the human BAC library RPCI-11. For BAC
Library availablity, please contact Pieter de Jong
(pleter@dejong.med.buffalo.edu). Clones may be purchased from
BACPAC Resources (http://bacpac.med.buffalo.edu/ordering_bac.htm)
or from Resear h Genetics (info@resgen.com). BAC end Web Server:
Plate: 907 row: M column: 15
Seg primer: SP6
Class: BAC ends
High quality sequence stop: 456.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Droso BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymoxphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ТККНТСТСТНКТТТКТWТТТМТWКАКGТКТGTTDКАКТКАТМАТGTКТATRTWTAATKTA 637
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CAAGGCGGTTAAACTTATTCAAGATTGACTGAGTCTCCTATTTTCCTTAAATTTACTAGA 145

Human, ss, breast specific nucleic acid, BSNA, breast cancer, mammary tumour, cytostatic, gene therapy, non-cancerous breast disorder. New breast-specific nucleic acids and polypeptides, useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and non-cancerous disease states in breast tissues. Turner LR; Human breast specific nucleic acid, BSNA #99. Liu C, ABK93493 standard; cDNA; 563 BP. Sun Y, Recipon H, Salceda S, 29-OCT-2001; 2001WO-US046888. 27-OCT-2000; 2000US-0243802P. (first entry) (DIAD-) DIADEXUS INC. WPI; 2002-463415/49. WO200236807-A2. Homo sapiens. 23-AUG-2002 10-MAY-2002. ABK93493; ABK93493

Claim 1; Page 191-192; 281pp; English.

The invention relates to breast specific nucleic acids (BSNA) and breast-specific polypeptides (BSP). Also included are a method for determining the BSNA in a sample, a vector comprising a BSNA, a host cell comprising the vector, a method for producing a polypeptide encoded by a BSNA, an anti-BSP antibody and a method for determining the presence of a BSP in a sample. The breast-specific nucleic acids, polypeptides and compositions comprising them are useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer, mammary tumour and non-cancerous disease states in breast tissue, for identifying breast tissue, for monitoring, identifying and/or designing agonists and anteagonists of the polypeptides; in gene therapy; in producing transgenic animals and

New transgenic non-human animal expressing a foreign polypeptide associated with drug behavior and/or metabolism, useful for studying the behavior and/or metabolism of a drug in other animals.

cells; for producing engineered breast tissue for treatment and research; and as elements in an array or computer program for pattern recognition of breast disorders. The nucleic acids may be used as hybridisation probes to detect, characterise and quantify hybridising nucleic acids in, and isolate hybridising nucleic acids from both genomic and transcript-derived nucleic acid samples. The BSP protein may be used in a vaccine composition for raising an immune response against breast cancer. The present sequence is BSNA cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TATGGTAGGGACTGGAGTAGGCATTCCAGGAAGGATCTCAGAGGTCAGAAACAATA 300

This invention relates to a transgenic non-human animal which may be used for assessing the behaviour and/or metabolism of a drug in another animal and/or metabolism. The invention also comprises a nucleic acid construct of and which expresses a foreign polypeptide associated with drug behaviour and/or metabolism. The invention also comprises a nucleic acid construct for use in producing the metabolism and/or behavior of a drug in an animal and a method interest, comprising administering a test agent to the transgenic animal and conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is useful in studying drug metabolism and/or behaviour in other animals. The nucleic acid construct is useful in producing the above transgenic animal and the methods are used for producing the above transgenic animal and the methods are used for producing, breeding and using transgenic animals for pharmacological studies. Nucleic acid sequences used within the invention are serum cliphosphoglucuronosyl transferase (UGT); multidrug resistance proteins and (MRP's). The present sequence represents a PCR primer used to create

                                                                                                                                                                                                                                       14-AUG-2000;
14-AUG-2000;
14-AUG-2000;
   The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to proteins, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polympeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hemmatopoiesis regulating activity, issue growth factor activity, immunomodulatory activity and activity, infill activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                            Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               430 CAGAAGACAATTCAAATGTCCTTACACAGAAGACTGATTATAGATAATGGTACATTCA 489

                   The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a

HUMAN GENOME SCI INC (HUMA-)

Barash SC, Ruben Rosen CA,

WPI; 2001-488786/53.

New isolated ovarian and/or breast cancer related nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders, particularly ovarian and/or breast cancer.

Disclosure; SEQ ID NO 1006; 577pp + Sequence Listing; English.

The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB1043-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The diagnosis, treatment and prevention of: a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, or varian cancer and other cancers of the adrenal gland, bone, bone marrow, or breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cartiovascular disorders such as woocardial ischaemias; (d) wound healing constitution of the printed specification, but was obtained in electronic format directly from the printed specification, but was obtained in electronic format directly xxx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid rehumant, Alzhahmer's disease, Alzhaliepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

A polymucleotide of the invention may have a use in gene therapp. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the sequences shown in ADCB7618-ADC87623 represent polymucleotide sequences related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polymeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the quannaline triphosphate-binding protein coupled receptor. The protein sequences shown in ADCR7618-ADCR7623 represent polymucleotide sequences related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        426 GAGACAGAAGACAATTCAAATGTCCTTACACAGAAGACTGATTATATAGATAATGGTACA 485

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Carter KC, Ebner R, Endress G, Horrigan S;

The present invention describes a method (MI) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in Ablie1664 to Abl70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prosperte or pancreafic cancer, adenocardinoma, cartionma, cardinoma, cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       159637 ATTGTTCAAAATAACAAAGATTGGAAAGAAGGCAAATATCCTTGAGTAGAAGACTGATG 159696

The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chips malysis as given in the specification, and comparing the expression level in an unactivated GC, where capable of differential expression of GS is indicative of GCA. Also included are differential expression of GS is indicative of GCA. Also included are capable of modulating (M2) GA by contacting GS (with an agent that alters the expression of at least one gene in GS, (2) screening (M3) for an agent capable of modulating GA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating capables of the tissue of gene(s) from GS, where the level of expression of the gene is indicative of inflammation; (4) treating capable of the tissue of subject, to a pathogen or sterile inflammatory disease, by contacting a tissue, having inflammation agent that modulates the expression of gene(s) from GS, in the tissue, M1 is useful for detecting on a subject, or screening an agent capable of modulating GA preferably in an inflammation in a tissue, an allergic response in a subject, consponse in a subject, or a pathogen or sterile inflammation in a tissue, M2 is useful for detecting an inflammation in a tissue, M2 is useful for detecting an inflammation in a tissue, an allergic response in a subject, considerable of modulating GA preferably in an inflammation in a tissue, main an allergic response in a subject, considered in granulocytes syndrome, inflammation in a tissue, an allergic response in a subject, condition, viral infection, parasitic infection, based in granulocytes (or conditions)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I)
anino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polyvarcleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the activity of coll and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cancers and cancer mecastases of haematopoietic-delies especially
cancers and cancer mecastases of haematopoietic antigen genomic
conservation and the present human immune/haematopoietic antigen genomic
conservation concer mecastases of haematopoietic antigen genomic
conservation concer mecastases of haematopoietic antigen genomic
conservation concervation invention. AAK54912 to AAK54550 and AAW82169
crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     409 ATAGGGCTGAAGAACAGGAGACAGAAGACAATTCAAATGTCCTTACACAGAAGACTGATT 468

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a nucleic acid molecule (I) encoding a Can 1 polypeptide. The Can 1 nucleic acid molecule is used to diagnose or treat infertility or premature ovarian failure or Sertoli Cell only syndrome in a mammal. The present sequence is that of a mouse Can 1 encoding chromosome 11 BAC clone $P$23-27018 of the invention. Note: The present sequence is not given in the printed specification but was obtained through the GenBank reference ACO833815
                                                                                                                                                                                                                                                                                                     A nucleic acid molecule (I) encoding a Can 1 polypeptide used in treating infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vunerary; antioonulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein; musculoskeletal system; ds.

(HUMA-) HUMAN GENOME SCI INC

```
The invention relates to movel genes (AAL34669-AAL37666) and proteins CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or amaliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues and isolated in the specification. The nucleic acids, proteins, antibodies and (anl)agonists are useful in the diagnosis, treatment and prevention cf. (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, claibetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis, (c) cardiovascular disorders such as myccardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, this patent did not form part of the printed specification, but was considered an electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5908 GAGGAACAAAAGCTTAAAGACAATCAAATGTCCTTTAATAGAGGGCTGTCTAAATCAAT 5967

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal

```
The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and antipodies and personal dart) agonists are useful in the diagnosis, treatment and prevention of (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogential, (b) immune discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, cohn's disease, multiple sclerosis, rheumatoid and ulcerative colitis; (c) cardiovascular disorders such as cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, batent fungal and parasitic infections. Note: The sequence data for the wipo int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 11027. Patent No. 5834248

GENERAL INFORMATION:

APPLICANT: FALB, DEAN A.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 38
CORRESPONDENCE ADDRESS:
ADDRESSEE: PENNIE & EDMONDS
STREET: 1155 Avenue of the Americas
CITY: New York
STATE: New York
COUNTRY: USA
                                                                                                                                                       402 GAGAGTGATAGGGCTGAAGAACAGGAGACAGAGACAATTCAAATGTCCTTACACAGAAG

Patent No. 5882951
Patent No. 5882951
GENERAL INFORMATION:
APPLICANT: FALB, DEAN A
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 54
CORRESPONDENCE ADDRESS:
ADDRESSEE: PENNIE & EDMONDS
STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                478 AIGGIACATICATATAAACAIGATATATITACTAATTAAAACATACCAACACACACA

Sequence 36, Application US/08485573

Patent No. 5968710.

Patent No. 5968710.

APPLICANT: FALB, DEAN A.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE

TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 38

CORRESPONDENCE ADDRESS:
ADDRESSEE: PENNIE & EDMONDS

STREET: 1155 Avenue of the Americas
CITY: New York

STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                    ó
